SUMMARY

- 5+ years in Software Engineering and working as a Senior .NET, Backend Developer (almost 5 years .NET stack, almost 2 years Full-stack, 2.5+ years JS stack).
- 2 years in the field of fintech business, payment systems.
- With good analysis thinking, and a problem-revolved, production mindset, I am always curious, constantly interested and experienced; I always research and improve products using best practices.
- Have expertise in migrating monolithic to micro-services architecture, so do have a good knowledge at design and implementing concepts of high-level design systems.
- Have expertise in planning, participating in analysis, good at team-work in both the internal teams and other, communication skills, and mentoring junior-mate abilities.
- My passion is programming, highly interested in system architecture, I improve myself every day by learning deep and hard technologies, Design Patterns, OOP, software design, planning time, and testing skills to become *Technical Architect* before 35yo.

SKILLS

Backend

- .NET C# stack [primary], NodeJS (ExpressJS) [secondary] with strong fundamental-knowledge OOP, DI, IoC, REST APIs, Asynchronous, Parallel TPL, Locking and Signal mechanism…
- Experiences in designing and implementing concepts of high-level design architecture, micro-service architecture with good fundamental-knowledge about 3rd provided services:
  - Message queue (Rabbit MQ, Kafka).
  - Distributed tracing-logging OpenTelemetry.
  - Redis use for (Caching, Pub/Sub Event, RedLock).

Frontend

- Strong experiences in FE like HTML5/CSS3, CSS Preprocessor SCSS/SASS.
- React, AngularJS, Angular 2+ experiences.

Database

- Experience in optimize query, store procedure (MSSQL, PostgreSql), ACID transactions. MongoDB query aggregation, atomic transactions. Design table scheme.

Other

- Fundamental-knowledge the field of financial technology business, payment systems, integrate PSP.
- Good at teamwork in both the internal teams and other teams such as DevOps team, QC team.
- Good at resolve problem troubling, analyze thinking, highly interested in system architecture.
- Working with cloud services: AWS (S3) / GCP (AppEngine / VisionOCR / Firebase / Sheets APIs)
- Git experience working with Git-Flow, setup simple CICD simple scripts with Github Action / Gitlab CICD.

- Experience in setup, and deploy source code to legacy web-servers (iis, nginx).
- Postman experience in setup scripts chaining request.

EDUCATION

Gia Định University **Sep 2013 - May 2017**

Information Technology / Software engineering

ACHIEVEMENT

Outstanding Project in 2022 **Feb 2022 - Sep 2022**

https://tuanhuynhit.dev/#achievement

By 2022, become one of team key-member, and has released a fully functional payment gateway service that connects varieties payment channels in just almost under 5 months. The service has been successfully integrated with VietJetAir (VJA) and is meeting VJA's numerous and extensive payment needs. The payment value through the service reached over 300b VND per month.

WORK EXPERIENCE

Galaxy Pay **Mar 2022 – Present**

Company of Sovico Group with the mission of providing strategic consulting solutions, developing digital transformation projects of member companies and operating new technology projects.

Software Engineer

Payment gateway

- **Description**: Intermediate payment gateway systems that integrated varieties top payment providers.
- **Responsibilities**:
  - Guarantee task time-line and quantify features.
  - Designing, implementing concepts of high-level design architecture, and code-base framework.
  - Migrating monolithic to scalable micro-services, build product-app from zero to meet time to market product released.
  - Mainly integrate PSP hub (Napas, MoMo, 2C2P, MPGs, CyberSource, etc…) to main services that become Payment Gateway support a variety of payment methods.
  - Participate with other teams supporting task to improve, and secure data logs system, trace, monitor, reach PCI DSS certificate, test-stage.
  - Mentor junior-mate on web-page, guide colleague to resolve solution, and meet deadline task on estimate time.
- **Result**: Migrating, refactoring successful the old integrate services to new ones, meet time to market product released. Highly Available, stable connect to PSP.
  Outstanting project, the payment value through the service reached over 300b VND per month.

VietCredit Finance Company **Nov 2020 – Feb 2022**

VietCredit Finance Joint Stock Company is allowed to execute the activities and the rights of the General Financial Company, according to financial laws and the permission of the State Bank of Vietnam. The company runs the activities such as capital mobility, granting of credit and loans, and other activities.

Backend Developer

Payment services layer

- **Description**: Layer service which has repositories to validated payment business rules, and process the online payment (include auto commit offline payment) before commits to Account Enterprise Core. Including auto-reconcile modules.
- **Responsibilities**:
  - Participate in enhancing and developing the payment service, and auto-reconcile payment module.
  - Integrate offline PSP and Develop auto-commit transactions from every day's batch files, auto-reconcile payment in scheduled; Eliminate daily manual accounting transaction commitment and reconciliation.

    (Personal implementation applies multiple-thread process concurrency to improve efficiency while maintaining accuracy).
  - Improving, maintaining transactions service (which layer apply bussiness validate transactions) before commits to Payment-Cores; Saving new featuring cost Enterprise core.
- **Results**: Eazy to adapt payment service in line with business requirements. Module auto-reconcile in schedule; Saving new featuring cost Enterprise core.

Customer services layer

- **Description**: Layer service which has repositories to related customer features, closely integrate with Customer Application Enterprise Core.
- **Responsibilities**:
  - Participate in developing, maintaining the customer service modules.
  - Integrated E-Contract service solution to the customer-services layer; Enhancing new customer-application business flow using e-contract and replacing old the traditional paper one.
  - Integrated 3rd party services OCR to business system in alpha-phrase; to reduce redundant customer application data.
- **Results**: Eazy to adapt payment service in line with business requirements. Module auto-reconcile in schedule. Saving new featuring cost Enterprise core.

Others

- Use throttling mechanism (without use 3rd MessageQueue) to send concurrency amount of SMS messages that are kept all night; Make sure networks aren't throttle.
- Participate in developing Auto Tools do some repetitive tasks; reduce daily redundant action from users.
- Participate in building management win-application print the Loan card; Saving a huge of cost for this new application from 3rd providers.

Freelance & Side Project

Dec 2019 – Present

As a developer, I always find the chance to learn new technical and work part-time to gain experience and improve myself everyday.

<u>Fullstack Developer</u>

Team Blockchain: **2021 - 2022**

NFT Gofox MarketPlace

- **Description**: Market Place for customers can mint and sell their NFT token get a reward, and airdrop owner coin on the website to the Ethereum networks and BSC token.
- **Responsibilities**:
  - Participate in developing, maintaining off-chain backend which mainly integrate blockchain networks.
  - Research and implementaion, develop Smartcontract, integrate RPC Web3, DApp.
  - Process atomic tranansactions business in line, sync distribute on schedule keep data consistent for report.
  - Build extension for project that extend light-weight library named "MongoDB Entities". https://github.com/huynhcamtuan1995/ExtendMongoDBEntities
  - Participate in dev a page ReactJS to meet a deadline.

- **Results**: Community's users can mint, trade the NFT, get a reward, and airdrop owner coin on the website to the Blockchain from our marketplace.

Team Web: **Dec 2019 - 2020**

- Resolve problem that saving 55% develop time by storing data on Google Sheet Cloud for only View – Export Excel data.
- Participate in refactoring from traditional SSR page to SPA for improve 28% performance, segregate FE & BE for horizontal scaling.
- Use throttling mechanism (without use 3rd MessageQueue) to move (download and upload) document from Cloud to DataCentral for saving cost.

TMG & iVIVU

Jun 2017 - Jun 2020

iVIVU.com is a member of the TMG Vietnam Group with more than 20 years of experience in the field of Tourism - Hospitality.Vietnam's Leading Online Travel Agency Channel 2021.

Fullstack Developer

Team TMG:

Web-app Victoria hotels, Emeraude cruises, Hai Au aviation

- **Description**: Website listing services and allowing customers to reserve bookings, administrator site for admin can easy to manage content.
- **Responsibilities**:
  - Participate in developing the whole cycle life of website, start analyzing business, designing database, build BE, FE.
  - Participate in developing, providing maintenance of TMG's products Web-app, achieved 100% client satisfaction and on-time completion.
  - Build high-customize modules shared Web-app products; saving development time by reusing built modules.
- **Results**: Achieved 100% client satisfaction and on-time completion. High-customize module can be shared through Web-app.

Team iVIVU:

iVIVU combo coach & hotels

- **Description**: iVIVU booking combo coach and hotel provide for internal staff easily to searching and booking combo.
- **Responsibilities**:
  - Integrate VeXeRe Apis into services and provide an intuitive FE for users to select seats, and book transfer coach using integrated Apis; Combine action VeXeRe's provided into ivivu Portal.
  - Participate in developing new Booking flight Web-app replacing old tranditional SSR page to SPA for improve performance.
- **Results**: Intuitive for user create combo booking hotels and coach in same services, reduce complexing booking coach step.

TPC Online Corp

Nov 2015 - Dec 2016

Game online company was produced and released a lot of famous games on ZingPlay platform.

Tester game, QC

- Test case and game to ensure the quality of the product.
- Make a Test case for testing.
