# HUỲNH CẨM TUẤN

## Technical-Lead Backend

Address: Tran Phu St., District 5, HCMC

Phone: **0347431015**

Email: **huynhcamtuan1995@gmail.com**

Website: **https://tuanhuynhit.dev**

Github: **github.com/huynhcamtuan1995**

Skype: **huynhcamtuan1995@outlook.com**

LinkedIn: **www.linkedin.com/in/tuan-h-24b259161**

Telegram: **@tuanhuynh95**

## SUMMARY

- 5+ years in .NET stack, including 2+ years in Full-stack.
- Under 2.5 years NodeJS stack.
- Have expertise in designing, and implementing high-level design systems in microservice architecture.
- My passion is programming, highly interested in system architecture, improve myself every day by learning deep and hard technical skills to become a *Technical Architect* before 35yo.

## SKILLS

**Programing Languages / Frameworks:**

- .NET C# stack (primary), NodeJS / ExpressJS
- Designing and implementing concepts of high-level design architecture, MSA with good fundamental knowledge about 3rd provided services:
  - Message queue (Rabbit MQ, Kafka).
  - Dapr.
  - Distributed tracing-logging OpenTelemetry (Grafana).
  - Redis (Caching, Pub/Sub Event, RedLock, Stream).
- Clouds: AWS (S3, SES) / GCP (AppEngine / VisionOCR / FCM / Sheets APIs)
- Strong experiences in FE like HTML5/CSS3, and CSS Preprocessor SCSS/SASS.
- Middle experience in TypeScript, React, Angular.

**Database Management Systems:**

- PostgreSQL, MySQL, NoSQL MongoDB, Redis.

**Others:**

- Strong fundamental knowledge in OOP, DI, IoC, REST APIs, asynchronous, parallel TPL, locking and signal mechanism…
- Good at collaborative teamwork, resolving blocking problems with other teams;
  Team setup skills: Postman scripts, flows, mock server...
  Also good at individual work.
- Resolving problem troubling, analyzing thinking skill, highly interested in system architecture.

## EDUCATION

**Gia Định University** — **Sep 2013 - May 2017**

*Information Technology / Software engineering*

## ACHIEVEMENT

**Outstanding Project in 2022** **Feb 2022 - Sep 2022**

**https://tuanhuynhit.dev/#achievement**

By 2022, become one of the team's key-member, and has released a fully functional payment gateway service that connects varieties payment channels in almost under 5 months. The service has been successfully integrated with VietJetAir (VJA) and is meeting VJA's numerous and extensive payment needs. The payment value through the service reached over 300b VND per month.

## WORK EXPERIENCE

### ITL Corp – VELA

**Apr 2023 – Present**

**Technical Project Leader**

**Responsibilities**:

- R&D making technical solution decisions, resolving disruptions, and blocking related to technical.
- Implement **Dapr** in MSA; Reduce integration time between services, flexible integrate message broker.
- Implement **Grafana** (Tempo/Loki/Metrics) to trace event pass-through services.
- Resolving blocking problems with other teams; Raise issues, and report to PM.
- Develop and maintain Code-base, implement DRY principle.
- Write coding conventions documents & related technical documents; Source code control quality, keeping clean code.

### Galaxy Pay

**Mar 2022 – Mar 2023**

**Software Engineering**

**Responsibilities**:

- Participate in R&D architecture; Migrating monolithic to scalable MSA.
- Designing, and implementing concepts of high-level design architecture, and code-base framework.
- Mainly integrate PSP hub (Napas, MoMo, 2C2P, MPGs, CyberSource, etc…) into services.
- Participate with other teams supporting tasks to improve, and secure data, log, trace, monitor, reach PCI DSS certificate, test-stage.
- Mentor junior-mate on web page, guide colleagues to resolve solutions, and meet deadline tasks on estimated time.

**Projects:** Payment aggregators service.

**Achieved**: Migrating, refactoring successfully. Highly Available, stable aggregate PSP systems.
Outstanding project, the payment value through the service reached over 300b VND per month.

**TechStack**: .NET C#, Node ExpressJS, PostgreSQL, Redis (Cache, Events, RedLock), Kafka, SocketIO, AWS, Grafana Distributed Trace/Log.

### VietCredit Finance Company

**Nov 2020 – Feb 2022**

**Backend Developer**

**Responsibilities**:

- Improving, maintaining transactions service (which layer applies business validate transactions); Saving new featuring cost Enterprise core.
- Build auto-reconcile payment module; Eliminate daily manual accounting transaction commitment and reconciliation.
- Integrate offline/online PSP system; Expand Payment methods via Providers.
  (Personal implementation applies multiple-threads process concurrency to improve efficiency while maintaining accuracy).
- Participate in developing, maintaining the customer service modules.
- Integrated 3rd service E-Contract solution to the customer-services layer; Replace old the traditional paper one.
- Integrated 3rd OCR services (GoogleVision/AzureOCR) into the system in a short time of alpha-test-phrase; Testing effectively of 3rd services to reduce redundancy input data.
- Apply (Semaphore, Multiple-threads) to limit concurrency amount of SMS messages sent; Prevent

networks aren't throttled at that time.
- Build auto-tools to do some repetitive tasks; Reduce daily redundancy of user's actions.
- Building the win-application that manages physical Loan cards; Saving a huge of cost for new applications from 3rd outsource providers.

**Projects**: Payment services layer, Customer services layer.

**TechStack:** .NET C#, MSSQL, AngularJS, Redis cache, RabbitMQ, Selenium, AWS.

---

## Freelance & Side Project

**Dec 2019 – 2022**

**FullStack Developer**

**Team Blockchain:** **2021 - 2022**

**Responsibilities**:
- R&D off-chain backend (sync distribute, integrate RPC).
- Mainly R&D Smart contract, integrated RPC Web3, DApp.
- Build an extension for the project that extends a lightweight library named "MongoDB Entities". https://github.com/huynhcamtuan1995/ExtendMongoDBEntities
- Participate in developing a page FE web page.

**Projects:** NFT Gofox MarketPlace webapp.

**TechStack:** ReactTS, Solidity SmartContract, BlockChain, Node ExpressJS, Redis cache, Solidity, MongoDB, GCP, etc....

**Team Web:** **Dec 2019 - 2020**

- Resolve problems that store data on Google Sheets for only View – Export Excel data; Saving 55% development time and cost.
- Migrating from traditional SSR page to SPA; Improve 28% performance, segregate FE & BE for horizontal scaling.
- Apply (Semaphore, CountdownEvent, Multiple-threads) to migrate (download and upload) documents from Cloud to DataCentral; Saving a lot of costs.

**Projects:** Movie web app**,** Buy & sell Apartment web app**.**

**TechStack:** PHP (Joomla, Laravel), MongoDB, JQuery, Bootstrap, Angular, Nginx, AWS.

---

## TMG & iVIVU

**Jun 2017 - Jun 2020**

**FullStack Developer**

**Team TMG:**

**Responsibilities**:
- Developing and maintaining the whole cycle life of web app products.
- Build high-customize modules shared web app products; Saving development time by reusing built modules.

**Projects:** Web app Victoria Hotels, Emeraude Cruises, Hai Au Aviation.

**TechStack:** PHP (Joomla), MySQL, JQuery, Bootstrap, UIKit, Nginx.

**Team iVIVU:**

**Responsibilities**:
- Integrate VeXeRe APIs into Ivivu portal, build FE UI; Staff can do combo-transfer booking from Ivivu portal.
- Participate in developing new Booking flight web app; Replace old traditional SSR page to SPA for improved performance.

**Projects:** iVIVU combo coach & hotels webapp.

**TechStack:** .NET C#, MSSQL, AngularJS, Angular 2+, Bootstrap, Material-UI.
