# HUỲNH CẨM TUẤN

## Team-Lead

Address: Tran Phu St., District 5, HCMC

Phone: **0347431015**

Email: **huynhcamtuan1995@gmail.com**

Website: **https://tuanhuynhit.dev**

Github: **github.com/huynhcamtuan1995**

Skype: **huynhcamtuan1995@outlook.com**

LinkedIn: **www.linkedin.com/in/tuan-huynh-24b259161**

Telegram: **@tuanhuynh95**

## SUMMARY

- 5+ years in Software Engineering working as .NET, Backend Developer (almost 5 years .NET stack, almost 2 years Full-stack, 2.5+ years JS stack).
- 2 years in the field of fintech business, payment systems.
- Good analysis thinking, and a problem-revolved, production mindset, always curious, and research and improve products.
- Have expertise in planning, participating in analysis, good at teamwork, communication skills, and mentoring junior-mate abilities.
- Have expertise in migrating monolithic to micro-services architecture, implementing concepts of high-level design systems.
- My passion is programming, highly interested in system architecture, improve myself every day by learning deep and hard technologies, Design Patterns, OOP, software design, planning time, and testing skills to become *Technical Architect* before 35yo.

## SKILLS

### Backend

- .NET C# stack (primary), NodeJS / ExpressJS (secondary) with strong fundamental-knowledge OOP, DI, IoC, REST APIs, Asynchronous, Parallel TPL, Locking and Signal mechanism…
- Experiences in designing and implementing concepts of high-level design architecture, MSA with good fundamental-knowledge about 3rd provided services:
  - Message queue (Rabbit MQ, Kafka).
  - Distributed tracing-logging OpenTelemetry.
  - Redis (Caching, Pub/Sub Event, RedLock).

### Frontend

- Strong experiences in FE like HTML5/CSS3, CSS Preprocessor SCSS/SASS.
- Middle-experience in TypeScript, React, Angular.

### Database

- Experience in optimize query, store procedure (MSSQL, PostgreSQL), ACID transactions. MongoDB query aggregation, atomic transactions. Design table scheme.

### Other

- Fundamental-knowledge the field of financial technology business, payment systems, integrate PSP.
- Good at teamwork in both the internal teams and other teams such as DevOps team, QC team.
- Good at resolve problem troubling, analyze thinking, highly interested in system architecture.
- Working with cloud services: AWS (S3) / GCP (AppEngine / VisionOCR / Firebase / Sheets APIs)
- Working with Git-Flow, setup simple CICD with Github Action / Gitlab CICD.
- Setup, and deploy source code to legacy web-servers (iis, nginx).

- Postman experience in setup scripts chaining request.

## EDUCATION

**Gia Định University** **Sep 2013 - May 2017**

*Information Technology / Software engineering*

## ACHIEVEMENT

**Outstanding Project in 2022** **Feb 2022 - Sep 2022**

**https://tuanhuynhit.dev/#achievement**

By 2022, become one of team key-member, and has released a fully functional payment gateway service that connects varieties payment channels in just almost under 5 months. The service has been successfully integrated with VietJetAir (VJA) and is meeting VJA's numerous and extensive payment needs. The payment value through the service reached over 300b VND per month.

## WORK EXPERIENCE

### Galaxy Pay **Mar 2022 – Present**

**Software Engineeing**

***Payment aggregators service***

**Description:** Migrating the old services, building new reliable services from zero; Develop in a short time meet time to market product released.

**Responsibilities**:

- Participate R&D architecture; Migrating monolithtic to scalable MSA.
- Designing, implementing concepts of high-level design architecture, and code-base framework.
- Mainly integrate PSP hub (Napas, MoMo, 2C2P, MPGs, CyberSource, etc…) into services.
- Participate with other teams supporting task to improve, and secure data, log, trace, monitor, reach PCI DSS certificate, test-stage.
- Mentor junior-mate on web-page, guide colleague to resolve solution, and meet deadline task on estimate time.

**Results**: Migrating, refactoring successful. Highly Available, stable connect to PSP.
Outstanting project, the payment value through the service reached over 300b VND per month.

**TechStack**: .NET C#, Node ExpressJS, PostgreSQL, Redis (Cache, Events, RedLock), Kafka, SocketIO, AWS.

### VietCredit Finance Company **Nov 2020 – Feb 2022**

**Backend Developer**

***Payment services layer***

**Description**: Layer service which has repositories to validated payment business rules, and process the online payment (include auto commit offline payment) before commits to Account Enterprise Core.

**Responsibilities**:

- Improving, maintaining transactions service (which layer apply bussiness validate transactions); Saving new featuring cost Enterprise core.
- Build auto-reconcile payment module; Eliminate daily manual accounting transaction commitment and reconciliation.
- Integrate offline/online PSP system; Expand Payment methods via Providers.
  (Personal implementation applies multiple-threads process concurrency to improve efficiency while maintaining accuracy).

**Results**: Eazy to adapt payment service in line with business requirements. Module auto-reconcile in

schedule; Saving new featuring cost Enterprise core.

***Customer services layer***

**Description**: Layer service which has repositories to related customer features, closely integrate with Customer Application Enterprise Core.

**Responsibilities**:

- Participate in developing, maintaining the customer service modules.
- Integrated 3rd service E-Contract solution to the customer-services layer; Replace old the traditional paper one.
- Integrated 3rd OCR services (GoogleVision/AzureOCR) into system in a short time of alpha-test-phrase; Testing effectively of 3rd services for reduce redundant input data.

**Results**: Eazy to adapt payment service in line with business requirements. new featuring cost Enterprise core.

***Others***

- Apply (Semaphore, Multiple-threads) to limit concurrency amount of SMS messages sent; Prevent networks aren't throttle at that time.
- Build auto-tools do some repetitive tasks; Reduce daily redundant of user's action.
- Building win-application that manages physical Loan card; Saving a huge of cost for new application from 3rd outsource providers.

**TechStack:** .NET C#, MSSQL, AngularJS, Redis cache, RabbitMQ, Selenium, AWS.

---

## Freelance & Side Project

**Dec 2019 – 2022**

**Fullstack Developer**

**Team Blockchain:** **2021 - 2022**

***NFT Gofox MarketPlace***

**Description**: Trending R&D NFT project, and build Market Place that allow users mint and sell their NFT token get a reward, and airdrop owner coin on Ethereum and BSC.

**Responsibilities**:

- R&D off-chain backend (sync distribute, integrate RPC).
- Mainly R&D Smartcontract, integrate RPC Web3, DApp.
- Build extension for project that extend light-weight library named "MongoDB Entities". https://github.com/huynhcamtuan1995/ExtendMongoDBEntities
- Participate in developing a page FE web-page.

**Results**: Users mint, trade the NFT, get a reward, and airdrop owner coin on off-chain to the Ethereum and BSC blockchain networks.

**TechStack:** ReactTS, Solidity SmartContract, BlockChain, Node ExpressJS, Redis cache, Solidity, MongoDB, GCP, etc....

**Team Web:** **Dec 2019 - 2020**

- Resolve problem that store data on Google Sheet for only View – Export Excel data; Saving 55% develop time and cost.
- Migrating from traditional SSR page to SPA; Improve 28% performance, segregate FE & BE for horizontal scaling.
- Apply (Semaphore, CountdownEvent, Multiple-threads) to migrate (download and upload) document from Cloud to DataCentral; Saving a lot of cost.

**TechStack:** PHP (Joomla, Laravel), MongoDB, JQuery, Bootstrap, Angular, Nginx, AWS.

## TMG & iVIVU

**Jun 2017 - Jun 2020**

**Fullstack Developer**

**Team TMG:**

***Web-app Victoria hotels, Emeraude cruises, Hai Au aviation***

**Description**: Build TMG's products web-app in a short time, with high-reusable feature's modules.

**Responsibilities**:

- Developing and maintaining the whole cycle life of Web-app products.
- Build high-customize modules shared Web-app products; Saving development time by reusing built modules.

**Results**: Achieved 100% client satisfaction and on-time completion. High-customize module can be shared through Web-app.

**TechStack:** PHP (Joomla), MySQL, JQuery, Bootstrap, UIKit, Nginx.

**Team iVIVU:**

***iVIVU combo coach & hotels***

**Description**: Sales waste time to create 2 booking from separately systems (iVIVU and VeXeRe); Need to integrate VeXeRe APIs to iVIVU system.

**Responsibilities**:

- Integrate VeXeRe APIs into Ivivu portal, build FE UI; Staff can do combo-transfer booking from Ivivu portal.
- Participate in developing new Booking flight Web-app; Replace old tranditional SSR page to SPA for improve performance.

**Results**: Intuitive for user create combo booking hotels and coach in same system, reduce complexing booking coach step.

**TechStack:** .NET C#, MSSQL, AngularJS, Angular 2+, Bootstrap, Material-UI.

---

## TPC Online Corp

**Nov 2015 - Dec 2016**

**Tester game, QC**

- Test case and game to ensure the quality of the product.
- Make a Test case for testing.
