HUỲNH CẨM TUẤN

Technical-Lead Backend

Address: Tran Phu St., District 5, HCMC

Phone: **0347431015**

Email: **huynhcamtuan1995@gmail.com**

Website: **https://tuanhuynhit.dev**

Github: **github.com/huynhcamtuan1995**

Skype: **huynhcamtuan1995@outlook.com**

LinkedIn: **www.linkedin.com/in/tuan-h-24b259161**

Telegram: **@tuanhuynh95**

SUMMARY

- 5+ years in .NET stack (extensive fundamental knowledge), include 2+ years Full-stack.
- Under 2.5 years NodeJS stack.
- Have expertise in various domain projects, include the field of fintech business, payment systems.
- Good analysis thinking, and a problem-revolved. Good at teamwork, communicated mentoring skills,
- Have expertise in designing, implementing high-level design systems in micro-service architecture.
- My passion is programming, highly interested in system architecture, improve myself every day by learning deep and hard technical skills to become *Technical Architect* before 35yo.

SKILLS

Backend

- .NET C# stack (primary), NodeJS / ExpressJS (secondary) with strong fundamental-knowledge OOP, DI, IoC, REST APIs, Asynchronous, Parallel TPL, Locking and Signal mechanism…
- Experiences in designing and implementing concepts of high-level design architecture, MSA with good fundamental-knowledge about 3rd provided services:
  - Message queue (Rabbit MQ, Kafka).
  - Dapr.
  - Distributed tracing-logging OpenTelemetry.
  - Redis (Caching, Pub/Sub Event, RedLock, Stream).

Frontend

- Strong experiences in FE like HTML5/CSS3, CSS Preprocessor SCSS/SASS.
- Middle-experience in TypeScript, React, Angular.

Database

- Experience in RDBM (MSSQL, PostgreSQL, MySQL), ACID transactions.
- Experience in NoSQL MongoDB, Redis.

More

- Fundamental-knowledge the field of financial technology business, payment systems, integrate PSP.
- Good at teamwork in both the internal teams and other teams such as DevOps team, QC team.
- Good at resolve problem troubling, analyze thinking, highly interested in system architecture.
- Working with cloud services: AWS (S3, SES) / GCP (AppEngine / VisionOCR / FCM / Sheets APIs)
- Working with Git-Flow, setup simple CICD with Github Action / Gitlab CICD.
- Setup, and deploy source code to legacy web-servers (iis, nginx).
- Postman experience in setup scripts chaining request.

EDUCATION

Gia Định University **Sep 2013 - May 2017**

Information Technology / Software engineering

ACHIEVEMENT

Outstanding Project in 2022 **Feb 2022 - Sep 2022**

https://tuanhuynhit.dev/#achievement

By 2022, become one of team key-member, and has released a fully functional payment gateway service that connects varieties payment channels in just almost under 5 months. The service has been successfully integrated with VietJetAir (VJA) and is meeting VJA's numerous and extensive payment needs. The payment value through the service reached over 300b VND per month.

WORK EXPERIENCE

Galaxy Pay **Mar 2022 – Mar 2023**

Software Engineeing

Responsibilities:

- Participate R&D architecture; Migrating monolithtic to scalable MSA.
- Designing, implementing concepts of high-level design architecture, and code-base framework.
- Mainly integrate PSP hub (Napas, MoMo, 2C2P, MPGs, CyberSource, etc…) into services.
- Participate with other teams supporting task to improve, and secure data, log, trace, monitor, reach PCI DSS certificate, test-stage.
- Mentor junior-mate on web-page, guide colleague to resolve solution, and meet deadline task on estimate time.

Projects: Payment aggregators service.

Archiment: Migrating, refactoring successful. Highly Available, stable aggregate PSP systems.
Outstanting project, the payment value through the service reached over 300b VND per month.

TechStack: .NET C#, Node ExpressJS, PostgreSQL, Redis (Cache, Events, RedLock), Kafka, SocketIO, AWS, Grafana Distributed Trace/Log.

VietCredit Finance Company **Nov 2020 – Feb 2022**

Backend Developer

Responsibilities:

- Improving, maintaining transactions service (which layer apply bussiness validate transactions); Saving new featuring cost Enterprise core.
- Build auto-reconcile payment module; Eliminate daily manual accounting transaction commitment and reconciliation.
- Integrate offline/online PSP system; Expand Payment methods via Providers.
  (Personal implementation applies multiple-threads process concurrency to improve efficiency while maintaining accuracy).
- Participate in developing, maintaining the customer service modules.
- Integrated 3rd service E-Contract solution to the customer-services layer; Replace old the traditional paper one.
- Integrated 3rd OCR services (GoogleVision/AzureOCR) into system in a short time of alpha-test-phrase; Testing effectively of 3rd services for reduce redundant input data.
- Apply (Semaphore, Multiple-threads) to limit concurrency amount of SMS messages sent; Prevent networks aren't throttle at that time.
- Build auto-tools do some repetitive tasks; Reduce daily redundant of user's action.
- Building win-application that manages physical Loan card; Saving a huge of cost for new application from 3rd outsource providers.

Projects: Payment services layer, Customer services layer.

TechStack: .NET C#, MSSQL, AngularJS, Redis cache, RabbitMQ, Selenium, AWS.

Freelance & Side Project

Dec 2019 – 2022

Fullstack Developer

Team Blockchain: **2021 - 2022**

Responsibilities:

- R&D off-chain backend (sync distribute, integrate RPC).
- Mainly R&D Smartcontract, integrate RPC Web3, DApp.
- Build extension for project that extend light-weight library named "MongoDB Entities". https://github.com/huynhcamtuan1995/ExtendMongoDBEntities
- Participate in developing a page FE web-page.

Projects: NFT Gofox MarketPlace webapp.

TechStack: ReactTS, Solidity SmartContract, BlockChain, Node ExpressJS, Redis cache, Solidity, MongoDB, GCP, etc....

Team Web: **Dec 2019 - 2020**

- Resolve problem that store data on Google Sheet for only View – Export Excel data; Saving 55% develop time and cost.
- Migrating from traditional SSR page to SPA; Improve 28% performance, segregate FE & BE for horizontal scaling.
- Apply (Semaphore, CountdownEvent, Multiple-threads) to migrate (download and upload) document from Cloud to DataCentral; Saving a lot of cost.

Projects: Movie webapp**,** Buy & sell Apartment webapp**.**

TechStack: PHP (Joomla, Laravel), MongoDB, JQuery, Bootstrap, Angular, Nginx, AWS.

TMG & iVIVU

Jun 2017 - Jun 2020

Fullstack Developer

Team TMG:

Responsibilities:

- Developing and maintaining the whole cycle life of Web-app products.
- Build high-customize modules shared Web-app products; Saving development time by reusing built modules.

Projects: Web-app Victoria hotels, Emeraude cruises, Hai Au aviation.

TechStack: PHP (Joomla), MySQL, JQuery, Bootstrap, UIKit, Nginx.

Team iVIVU:

Responsibilities:

- Integrate VeXeRe APIs into Ivivu portal, build FE UI; Staff can do combo-transfer booking from Ivivu portal.
- Participate in developing new Booking flight Web-app; Replace old tranditional SSR page to SPA for improve performance.

Projects: iVIVU combo coach & hotels webapp.

TechStack: .NET C#, MSSQL, AngularJS, Angular 2+, Bootstrap, Material-UI.

TPC Online Corp

Nov 2015 - Dec 2016

Tester game, QC

- Test case and game to ensure the quality of the product.
- Make a Test case for testing.
