SUMMARY

- 5+ years in Software Engineering working as .NET, Backend Developer (almost 5 years .NET stack, almost 2 years Full-stack, 2.5+ years JS stack).
- 2 years in the field of fintech business, payment systems.
- Good analysis thinking, and a problem-revolved, production mindset, always curious, and research and improve products.
- Have expertise in planning, participating in analysis, good at teamwork, communication skills, and mentoring junior-mate abilities.
- Have expertise in migrating monolithic to micro-services architecture, implementing concepts of high-level design systems.
- My passion is programming, highly interested in system architecture, improve myself every day by learning deep and hard technologies, Design Patterns, OOP, software design, planning time, and testing skills to become *Technical Architect* before 35yo.

SKILLS

Backend

- .NET C# stack [primary], NodeJS (ExpressJS) [secondary] with strong fundamental-knowledge OOP, DI, IoC, REST APIs, Asynchronous, Parallel TPL, Locking and Signal mechanism…
- Experiences in designing and implementing concepts of high-level design architecture, micro-service architecture with good fundamental-knowledge about 3rd provided services:
  - Message queue (Rabbit MQ, Kafka).
  - Distributed tracing-logging OpenTelemetry.
  - Redis use for (Caching, Pub/Sub Event, RedLock).

Frontend

- Strong experiences in FE like HTML5/CSS3, CSS Preprocessor SCSS/SASS.
- React, TypeScript, AngularJS, Angular 2+ experiences.

Database

- Experience in optimize query, store procedure (MSSQL, PostgreSql), ACID transactions. MongoDB query aggregation, atomic transactions. Design table scheme.

Other

- Fundamental-knowledge the field of financial technology business, payment systems, integrate PSP.
- Good at teamwork in both the internal teams and other teams such as DevOps team, QC team.
- Good at resolve problem troubling, analyze thinking, highly interested in system architecture.
- Working with cloud services: AWS (S3) / GCP (AppEngine / VisionOCR / Firebase / Sheets APIs)
- Working with Git-Flow, setup simple CICD with Github Action / Gitlab CICD.
- Setup, and deploy source code to legacy web-servers (iis, nginx).

- Postman experience in setup scripts chaining request.

EDUCATION

Gia Định University **Sep 2013 - May 2017**

Information Technology / Software engineering

ACHIEVEMENT

Outstanding Project in 2022 **Feb 2022 - Sep 2022**

https://tuanhuynhit.dev/#achievement

By 2022, become one of team key-member, and has released a fully functional payment gateway service that connects varieties payment channels in just almost under 5 months. The service has been successfully integrated with VietJetAir (VJA) and is meeting VJA's numerous and extensive payment needs. The payment value through the service reached over 300b VND per month.

WORK EXPERIENCE

Galaxy Pay **Mar 2022 – Present**

Software Engineeing

Payment gateway

Description: Intermediate payment gateway systems that integrated varieties top payment providers.

Responsibilities:

- Guarantee task time-line and quantify features.
- Migrating monolithic to scalable micro-services; Build product-app from zero;
- Designing, implementing concepts of high-level design architecture, and code-base framework.
- Mainly integrate PSP hub (Napas, MoMo, 2C2P, MPGs, CyberSource, etc…) into services.
- Participate with other teams supporting task to improve, and secure data, log, trace, monitor, reach PCI DSS certificate, test-stage.
- Mentor junior-mate on web-page, guide colleague to resolve solution, and meet deadline task on estimate time.

Results: Migrating, refactoring successful the old integrate services to new ones, meet time to market product released. Highly Available, stable connect to PSP.

Outstanting project, the payment value through the service reached over 300b VND per month.

TechStack: .NET C#, Node ExpressJS, PostgreSQL, Redis (Cache, Events, RedLock), Kafka, SocketIO, AWS.

VietCredit Finance Company **Nov 2020 – Feb 2022**

Backend Developer

Payment services layer

Description: Layer service which has repositories to validated payment business rules, and process the online payment (include auto commit offline payment) before commits to Account Enterprise Core. Including auto-reconcile modules.

Responsibilities:

- Improving, maintaining transactions service (which layer apply bussiness validate transactions); Saving new featuring cost Enterprise core.
- Build auto-reconcile payment module; Eliminate daily manual accounting transaction commitment and reconciliation.
- Integrate offline/online PSP system.

(Personal implementation applies multiple-thread process concurrency to improve efficiency while maintaining accuracy).

Results: Eazy to adapt payment service in line with business requirements. Module auto-reconcile in schedule; Saving new featuring cost Enterprise core.

Customer services layer

Description: Layer service which has repositories to related customer features, closely integrate with Customer Application Enterprise Core.

Responsibilities:

- Participate in developing, maintaining the customer service modules.
- Integrated E-Contract service solution to the customer-services layer; Replace old the traditional paper one.
- Integrated 3rd party services OCR into system in alpha-phrase; Reduce redundant customer-application data.

Results: Eazy to adapt payment service in line with business requirements. Module auto-reconcile in schedule. Saving new featuring cost Enterprise core.

Others

- Use (Semaphore, Multiple-threads) to limit concurrency amount of SMS messages sent; Prevent networks aren't throttle at that time.
- Build auto-tools do some repetitive tasks; Reduce daily redundant of user's action.
- Building win-application that manages physical Loan card; Saving a huge of cost for new application from 3rd outsource providers.

TechStack: .NET C#, MSSQL, AngularJS, Redis cache, RabbitMQ, Selenium, AWS.

Freelance & Side Project

Dec 2019 – 2022

Fullstack Developer

Team Blockchain: **2021 - 2022**

NFT Gofox MarketPlace

Description: MarketPlace for customers can mint and sell their NFT token get a reward, and airdrop owner coin on the website to the Ethereum networks and BSC token.

Responsibilities:

- Developing, maintaining off-chain backend (sync distribute, integrate RPC).
- Mainly research and develop Smartcontract, integrate RPC Web3, DApp.
- Build extension for project that extend light-weight library named "MongoDB Entities". https://github.com/huynhcamtuan1995/ExtendMongoDBEntities
- Participate in developing a page FE web-page.

Results: Community's users can mint, trade the NFT, get a reward, and airdrop owner coin on the website to the Blockchain from our marketplace.

TechStack: React with TypeScript, Solidity SmartContract, BlockChain, Node ExpressJS, Redis cache, Solidity, MongoDB, GCP, etc....

Team Web: **Dec 2019 - 2020**

- Resolve problem that store data on Google Sheet for only View – Export Excel data; Saving 55% develop time and cost.
- Refactoring from traditional SSR page to SPA; Improve 28% performance, segregate FE & BE for horizontal scaling.
- Use (Semaphore, CountdownEvent, Multiple-threads) to migrate (download and upload) document from Cloud to DataCentral; Saving a lot of cost.

TechStack: PHP (Joomla, Laravel), MongoDB, JQuery 3, Bootstrap 4, Angular 6, Nginx, AWS.

TMG & iVIVU

Jun 2017 - Jun 2020

Fullstack Developer

Team TMG:

Web-app Victoria hotels, Emeraude cruises, Hai Au aviation

Description: Website listing services and allowing customers to reserve bookings, administrator site for admin can easy to manage content.

Responsibilities:

- Developing and maintaining the whole cycle life of Web-app products.
- Build high-customize modules shared Web-app products; Saving development time by reusing built modules.

Results: Achieved 100% client satisfaction and on-time completion. High-customize module can be shared through Web-app.

TechStack: PHP (Joomla), MySQL, JQuery 3, Bootstrap 3-4, UIKit 2, Nginx.

Team iVIVU:

iVIVU combo coach & hotels

Description: iVIVU booking combo coach and hotel provide for internal staff easily to searching and booking combo.

Responsibilities:

- Integrate VeXeRe APIs into Ivivu portal, build FE UI; Staff can do combo-transfer booking from Ivivu portal.
- Participate in developing new Booking flight Web-app; Replace old tranditional SSR page to SPA for improve performance.

Results: Intuitive for user create combo booking hotels and coach in same services, reduce complexing booking coach step.

TechStack: .NET C#, MSSQL, AngularJS, Angular 6-8, Bootstrap 4, Material-UI.

TPC Online Corp

Nov 2015 - Dec 2016

Tester game, QC

- Test case and game to ensure the quality of the product.
- Make a Test case for testing.
